GIRLS SCHOOLS & COLLEGE

San-Burn introducing "Sanitary Napkin destroyer" in field of Waste Management Equipment for Environment friendly and hygienic disposal of sanitary napkins. This units are available in MS and SS (Stainless Steel) for good looks and ideal for sanitary napkin disposal. It is easy to use and fully automatic that operates on domestic power supply. San-Burn "Sanitary Napkin Destroyer" burns the sanitary pads disposed into the machine and releases the smoke through exhaust line. Remaining ash can be collected into ash tray after burn process is over.

Large number of girls are in secondary education when they begin menstruating and more than 70% of them use an old cloth which is often reused. Such kind of unhygienic methods can cause reproductive tract infection compared to those who use sanitary napkins. One major cause of unawareness about hygienic safety during menstruation is that it is considered as social taboo and they are not open to discuss problems freely. Large number of girls drop out of schools when they begin menstruating in rural area. Even in urban area they feel more conscious about it and inconvenient about disposing soiled sanitary napkins.

Instead of using sanitary napkin disposal bags or Bins or Containers or sanitary napkin disposal receptacles, This unit can be used with sanitary napkin dispensers or sanitary napkin Vending Machine for sanitary waste Disposal. The Sanitary Napkin Disposal Bins or Containers are Just Store the Sanitary Waste. It required Disposal of the waste which is possible by the Burning of the waste in a Closed Chamber. Which is possible with our Sanitary Pad Disposal System.

Public Places

Many organisations have been working towards adequate female sanitation facilities, and better awareness and understanding of menstruation. So taking all the points into consideration, SanBurn comes with an appropriate solution for this problem is to burn the sanitary napkins and convert it into ash, which is safe and biodegradable option to dispose used sanitary napkins. Our "Sanitary Napkin Disposal Units" are Very Easy to Operate, Very Compact in size, Fully Automatic Cut Off after Burning, Can be Mounted in Toilets, Require less than 10 Minutes. And that's where we step-in..

Our "Sanitary Napkin Disposal Units" can be used Widely in Public Rest Room, Railway Toilets, Air Ports, Air Crafts Toilets, Public Toilets, Schools, Colleges, Girls Hostels, Apartments, Individual Bungalows, Hotels, Resorts, Shops, Offices, Industries, and any other place for the disposal of Used Sanitary Napkins. The Unit helps to Destroy the Sanitary Pads with a Simple Technology, Cost effective and Pollution free way of disposal. It burns the Used Sanitary Pads (Hazardous Sanitary Napkins) in to Non-Hazardous Ash.

This will increase the efficiency of her work

Corporate Sector

San-Burn "Sanitary Napkin Destroyer" are used for instant disposal of used sanitary pads in most hygienic and scientific way to assure environment friendly disposal. They are often known as Sanitary Napkin Burner, Sanitary Napkin Incinerator, Sanitary Pad Burner, Sanitary Napkin Disposal Machine, Sanitary Napkin Dispenser, Sanitary Napkin Burning Machine, Sanitary Pad Dispenser, Napkin Burning Machine, Sanitary Pad Burner.

Disposable sanitary napkins today have a high content of LDPE plastic polymers and a layer made out of polyacrylate, the polyacrylate layer is a super-absorbent gel, which absorbs the menses to give one that feel-dry feeling, also soaks up water when it is flushed down the toilet. In certain scenario, they wrap it in plastic bag and drop it in bathroom dustbin.

Both of the above disposal creates problems as Flushing it in drain causes clogging in drainage system and dropping it in dustbin may results in health related issues. In Flushing it continues to bloat as it makes its way through the underground rivers and clogs up the sewers leading conservancy workers to dive down and remove them by hand.

It is the best solution for sanitary napkin disposing needs wherein the used napkins are converted into a sterile ash. It helps to instant disposal of a used napkins in a very Scientific and Hygienic Way, so it is very useful for all ladies toilets to get an pollution free hygienic environment. Incinerators need to be used at a certain temperature level (Around 800 degrees Celsius). Schools, institutions and even at community level these incinerators can be installed.

Areas of installation

- Girls Hostel, schools & colleges
- Women's Hostel and Hospitals
- Corporate Offices & Factories
- Shopping Malls & Complex
- Hotels and Clubs
- Theme Parks & Theater Hall
- Airports, Railway Stations, Bus Stations
- Public Toilets

Solution to the problem

Many organisations have been working towards adequate female sanitation facilities, and better awareness and understanding of menstruation.

Incinerators need to be used at a certain temperature level (Around 800 degrees Celsius). Schools, institutions and even at community level these incinerators can be installed. Incinerators can be used in controlled environment so that the harmful gases released do not harm a larger area.
